# ContractRite

AXXIS

BY OPIS, A DOW JONES COMPANY

Calculate and compare fuel price formulas automatically to make smarter purchases.

ContractRite from Axxis Software lets you automatically calculate and store contract prices side by side with rack prices in your internal system for real-time sourcing.

## Market Challenge

Fuel contract price calculations are typically performed on multiple spreadsheets which aren't integrated with back office systems, making it difficult to compare prices against each other. This process is manual, clumsy and time-consuming.

## How We Help

Axxis ContractRite allows you to calculate any pricing formula, whether from a supplier contract price, or your own supply price. It then integrates results into your pricing system for direct comparison with rack prices to give you an instant view of the best purchasing price. It also allows you to automate calculation of customer contract pricing with automated pass through to the Axxis Quote and Notify system.

## Benefits

- Access a comprehensive library of simple and complex formula calculation templates with multiple parameters for adjustment, for ease of setup

- Store all prices in one place automatically for easier historical analysis

- Calculate contracts using dynamic RINs values

- Track contract start and end dates and volumes on a schedule you choose

- Provide more flexibility in pricing for customers and prospects
